INTRODUCTION

A replacement box latch in case you lose one from the boxes our Crazy Circuits Kits come in.

TOOLS:

- [3D Printer](#) (1)
-

Step 1 — Download and Print

- You can download the file and print it on your own 3D Printer.
- Find it in our GitHub repository: <https://github.com/BrownDogGadgets/3D-Pr...>
- You can also find it on Printables: <https://www.printables.com/model/450146-...>
- You'll need to print it standing on edge, with supports enable. Make sure you remove the supports before attaching to the box lid.

Step 2 — Tips & Tricks

⚠ Every 3D printer is a little different! If your part doesn't fit properly here are a few things to try.

- Part too tight? Try sanding it or cutting away some material with a knife.
- Part too loose? Add some tape as a shim.
- You can also try printing it at slightly more or less than 100% scale.
- Special thanks to Dan Riles for sending us the file he create so we could share it!
